

# Contents

<b>1</b>	<b>Background: Problem and Methods</b>	1
1.1	Action Potentials	1
1.2	Markov Models	4
1.2.1	The Master Equation	5
1.2.2	The Master Equation of a Three-State Model	7
1.2.3	Monte Carlo Simulations Based on the Markov Model	8
1.2.4	Comparison of Monte Carlo Simulations and Solutions of the Master Equation	8
1.2.5	Equilibrium Probabilities	8
1.2.6	Detailed Balance	10
1.3	The Master Equation and the Equilibrium Solution	11
1.3.1	Linear Algebra Approach to Finding the Equilibrium Solution	12
1.4	Stochastic Simulations and Probability Density Functions	13
1.5	Markov Models of Calcium Release	13
1.6	Markov Models of Ion Channels	14
1.7	Mutations Described by Markov Models	14
1.8	The Problem and Steps Toward Solutions	15
1.8.1	Markov Models for Drugs: Open State and Closed State Blockers	16
1.8.2	Closed to Open Mutations (CO-Mutations)	16
1.8.3	Open to Closed Mutations (OC-Mutations)	17
1.9	Theoretical Drugs	18
1.10	Results	19
1.11	Other Possible Applications	19
1.12	Disclaimer	20
1.13	Notes	20

<b>2</b>	<b>One-Dimensional Calcium Release</b> .....	23
2.1	Stochastic Model of Calcium Release .....	25
2.1.1	Bounds of the Concentration .....	26
2.1.2	An Invariant Region for the Solution .....	27
2.1.3	A Numerical Scheme .....	28
2.1.4	An Invariant Region for the Numerical Solution .....	28
2.1.5	Stochastic Simulations .....	29
2.2	Deterministic Systems of PDEs Governing the Probability Density Functions .....	30
2.2.1	Probability Density Functions .....	31
2.2.2	Dynamics of the Probability Density Functions .....	32
2.2.3	Advection of Probability Density .....	32
2.2.4	Changing States: The Effect of the Markov Model .....	36
2.2.5	The Closed State .....	36
2.2.6	The System Governing the Probability Density Functions .....	37
2.3	Numerical Scheme for the PDF System .....	37
2.4	Rapid Convergence to Steady State Solutions .....	38
2.5	Comparison of Monte Carlo Simulations and Probability Density Functions .....	40
2.6	Analytical Solutions in the Stationary Case .....	41
2.7	Numerical Solution Accuracy .....	44
2.7.1	Stationary Solutions Computed by the Numerical Scheme .....	44
2.7.2	Comparison with the Analytical Solution: The Stationary Solution .....	45
2.8	Increasing the Reaction Rate from Open to Closed .....	46
2.9	Advection Revisited .....	48
2.10	Appendix: Solving the System of Partial Differential Equations .....	50
2.10.1	Operator Splitting .....	50
2.10.2	The Hyperbolic Part .....	51
2.10.3	The Courant–Friedrichs–Lewy Condition .....	53
2.11	Notes .....	53
<b>3</b>	<b>Models of Open and Closed State Blockers</b> .....	55
3.1	Markov Models of Closed State Blockers for CO-Mutations .....	56
3.1.1	Equilibrium Probabilities for Wild Type .....	57
3.1.2	Equilibrium Probabilities for the Mutant Case .....	57
3.1.3	Equilibrium Probabilities for Mutants with a Closed State Drug .....	58
3.2	Probability Density Functions in the Presence of a Closed State Blocker .....	59
3.2.1	Numerical Simulations with the Theoretical Closed State Blocker .....	60

- 3.3 Asymptotic Optimality for Closed State Blockers  
in the Stationary Case ..... 63
- 3.4 Markov Models for Open State Blockers ..... 64
  - 3.4.1 Probability Density Functions in the Presence  
of an Open State Blocker..... 66
- 3.5 Open Blocker Versus Closed Blocker ..... 66
- 3.6 CO-Mutations Does Not Change the Mean Open Time ..... 68
- 3.7 Notes ..... 69
- 4 Properties of Probability Density Functions** ..... 71
  - 4.1 Probability Density Functions ..... 71
  - 4.2 Statistical Characteristics ..... 72
  - 4.3 Constant Rate Functions ..... 73
    - 4.3.1 Equilibrium Probabilities..... 74
    - 4.3.2 Dynamics of the Probabilities..... 74
    - 4.3.3 Expected Concentrations ..... 75
    - 4.3.4 Numerical Experiments ..... 76
    - 4.3.5 Expected Concentrations in Equilibrium ..... 78
  - 4.4 Markov Model of a Mutation ..... 78
    - 4.4.1 How Does the Mutation Severity Index  
Influence the Probability Density Function  
of the Open State? ..... 80
    - 4.4.2 Boundary Layers..... 82
  - 4.5 Statistical Properties as Functions of the Mutation  
Severity Index ..... 83
    - 4.5.1 Probabilities..... 83
    - 4.5.2 Expected Calcium Concentrations..... 84
    - 4.5.3 Expected Calcium Concentrations in Equilibrium ..... 86
    - 4.5.4 What Happens as  $\mu \rightarrow \infty$ ?..... 87
  - 4.6 Statistical Properties of Open and Closed State Blockers ..... 88
  - 4.7 Stochastic Simulations Using Optimal Drugs ..... 89
  - 4.8 Notes ..... 90
- 5 Two-Dimensional Calcium Release** ..... 91
  - 5.1 2D Calcium Release..... 92
    - 5.1.1 The 1D Case Revisited: Invariant Regions  
of Concentration ..... 93
    - 5.1.2 Stability of Linear Systems ..... 94
    - 5.1.3 Convergence Toward Two Equilibrium Solutions..... 94
    - 5.1.4 Properties of the Solution of the Stochastic  
Release Model ..... 97
    - 5.1.5 Numerical Scheme for the 2D Release Model ..... 97
    - 5.1.6 Invariant Region for the 2D Case ..... 98

5.2	Probability Density Functions in 2D .....	102
5.2.1	Numerical Method for Computing the Probability Density Functions in 2D .....	102
5.2.2	Rapid Decay to Steady State Solutions in 2D .....	103
5.2.3	Comparison of Monte Carlo Simulations and Probability Density Functions in 2D .....	104
5.2.4	Increasing the Open to Closed Reaction Rate in 2D .....	106
5.3	Notes .....	107
<b>6</b>	<b>Computing Theoretical Drugs in the Two-Dimensional Case .....</b>	<b>109</b>
6.1	Effect of the Mutation in the Two-Dimensional Case .....	110
6.2	A Closed State Drug .....	111
6.2.1	Convergence as $k_{bc}$ Increases .....	113
6.3	An Open State Drug .....	113
6.3.1	Probability Density Model for Open State Blockers in 2D .....	114
6.4	Statistical Properties of the Open and Closed State Blockers in 2D .....	115
6.5	Numerical Comparison of Optimal Open and Closed State Blockers .....	116
6.6	Stochastic Simulations in 2D Using Optimal Drugs .....	117
6.7	Notes .....	118
<b>7</b>	<b>Generalized Systems Governing Probability Density Functions .....</b>	<b>119</b>
7.1	Two-Dimensional Calcium Release Revisited .....	119
7.2	Four-State Model .....	121
7.3	Nine-State Model .....	122
<b>8</b>	<b>Calcium-Induced Calcium Release .....</b>	<b>125</b>
8.1	Stochastic Release Model Parameterized by the Transmembrane Potential .....	126
8.1.1	Electrochemical Goldman–Hodgkin–Katz (GHK) Flux .....	128
8.1.2	Assumptions .....	128
8.1.3	Equilibrium Potential .....	129
8.1.4	Linear Version of the Flux .....	129
8.1.5	Markov Models for CICR .....	130
8.1.6	Numerical Scheme for the Stochastic CICR Model .....	131
8.1.7	Monte Carlo Simulations of CICR .....	131
8.2	Invariant Region for the CICR Model .....	131
8.2.1	A Numerical Scheme .....	133
8.3	Probability Density Model Parameterized by the Transmembrane Potential .....	135
8.4	Computing Probability Density Representations of CICR .....	136

- 8.5 Effects of LCC and RyR Mutations ..... 138
  - 8.5.1 Effect of Mutations Measured in a Norm..... 138
  - 8.5.2 Mutations Increase the Open Probability  
of Both the LCC and RyR Channels..... 139
  - 8.5.3 Mutations Change the Expected Values  
of Concentrations ..... 141
- 8.6 Notes ..... 142
- 9 Numerical Drugs for Calcium-Induced Calcium Release** ..... 143
  - 9.1 Markov Models for CICR, Including Drugs ..... 143
    - 9.1.1 Theoretical Blockers for the RyR..... 144
    - 9.1.2 Theoretical Blockers for the LCC ..... 144
    - 9.1.3 Combined Theoretical Blockers for the LCC  
and the RyR..... 145
  - 9.2 Probability Density Functions Associated  
with the 16-State Model..... 146
  - 9.3 RyR Mutations Under a Varying Transmembrane Potential ..... 146
    - 9.3.1 Theoretical Closed State Blocker Repairs  
the Open Probabilities of the RyR CO-Mutation ..... 147
    - 9.3.2 The Open State Blocker Does Not Work  
as Well as the Closed State Blocker for  
CO-Mutations in RyR ..... 148
  - 9.4 LCC Mutations Under a Varying Transmembrane Potential ..... 149
    - 9.4.1 The Closed State Blocker Repairs the Open  
Probabilities of the LCC Mutant ..... 150
- 10 A Prototypical Model of an Ion Channel** ..... 153
  - 10.1 Stochastic Model of the Transmembrane Potential ..... 154
    - 10.1.1 A Numerical Scheme ..... 155
    - 10.1.2 An Invariant Region ..... 155
  - 10.2 Probability Density Functions for the Voltage-Gated Channel..... 156
  - 10.3 Analytical Solution of the Stationary Case..... 157
  - 10.4 Comparison of Monte Carlo Simulations  
and Probability Density Functions ..... 159
  - 10.5 Mutations and Theoretical Drugs ..... 160
    - 10.5.1 Theoretical Open State Blocker..... 160
    - 10.5.2 Theoretical Closed State Blocker ..... 161
    - 10.5.3 Numerical Computations Using  
the Theoretical Blockers ..... 162
    - 10.5.4 Statistical Properties of the Theoretical Drugs ..... 162
  - 10.6 Notes ..... 164
- 11 Inactivated Ion Channels: Extending the Prototype Model** ..... 165
  - 11.1 Three-State Markov Model ..... 165
    - 11.1.1 Equilibrium Probabilities..... 166

11.2	Probability Density Functions in the Presence of the Inactivated State .....	167
11.2.1	Numerical Simulations .....	168
11.3	Mutations Affecting the Inactivated State of the Ion Channel .....	168
11.4	A Theoretical Drug for Mutations Affecting the Inactivation .....	169
11.4.1	Open Probability in the Mutant Case .....	171
11.4.2	The Open Probability in the Presence of the Theoretical Drug .....	172
11.5	Probability Density Functions Using the Blocker of the Inactivated State .....	173
<b>12</b>	<b>A Simple Model of the Sodium Channel</b> .....	<b>177</b>
12.1	Markov Model of a Wild Type Sodium Channel .....	178
12.1.1	The Equilibrium Solution .....	179
12.2	Modeling the Effect of a Mutation Impairing the Inactivated State .....	180
12.2.1	The Equilibrium Probabilities .....	180
12.3	Stochastic Model of the Sodium Channel .....	181
12.3.1	A Numerical Scheme with an Invariant Region .....	182
12.4	Probability Density Functions for the Voltage-Gated Channel .....	183
12.4.1	Model Parameterization .....	184
12.4.2	Numerical Experiments Comparing the Properties of the Wild Type and the Mutant Sodium Channel .....	185
12.4.3	Stochastic Simulations Illustrating the Late Sodium Current in the Mutant Case .....	186
12.5	A Theoretical Drug Repairing the Sodium Channel Mutation .....	187
12.5.1	Numerical Experiments Using the Blocker of the Inactivated State .....	188
12.5.2	The Late Sodium Current Is Removed by the Inactivated State Blocker .....	190
12.6	Notes .....	190
<b>13</b>	<b>Mutations Affecting the Mean Open Time</b> .....	<b>193</b>
13.1	The Mean Open Time .....	194
13.1.1	Mean Open Time for More Than One Open State .....	196
13.2	Numerical Experiments .....	198
13.2.1	Mean Open Time and Equilibrium Open Probability: Theoretical Values Versus Sample Mean Values .....	199
13.2.2	The Closed to Open Rate $k_{co}$ Does Not Affect the Mean Open Time .....	200
13.2.3	The Mean Open Time in the Presence of Two Open States .....	201
13.2.4	Changing the Mean Open Time Affects the Dynamics of the Transmembrane Potential .....	201

- 13.3 Changing the Mean Open Time Affects the Probability Density Functions ..... 203
- 13.4 Theoretical Drugs for OC-Mutations ..... 205
  - 13.4.1 The Theoretical Closed State Blocker Does Not Work for the OC-Mutation ..... 207
  - 13.4.2 The Theoretical Open State Blocker Repairs the Effect of the OC-Mutation ..... 210
  - 13.4.3 The Theoretical Open State Blocker Is Optimal ..... 211
  - 13.4.4 Stochastic Simulations Using the Optimal Open State Blocker ..... 213
- 13.5 Inactivated States and Mean Open Time ..... 215
  - 13.5.1 A Theoretical Open State Blocker ..... 216
  - 13.5.2 Probability Density Functions Using the Open State Blocker ..... 218
  - 13.5.3 Stochastic Simulations Using the Open State Blocker ..... 220
- 13.6 Notes ..... 221
- 14 The Burst Mode of the Mutant Sodium Channel ..... 223**
  - 14.1 Equilibrium Probabilities ..... 224
  - 14.2 The Mean Open Time ..... 225
  - 14.3 An Optimal Theoretical Open State Blocker ..... 225
  - 14.4 Numerical Experiments ..... 227
    - 14.4.1 Representation of the Late Sodium Current Using the Burst Mode Model ..... 227
    - 14.4.2 The Open State Blocker Repairs the Effect of the Mutation ..... 227
  - 14.5 A More Sophisticated Markov Model ..... 228
  - 14.6 Numerical Experiments Illustrating the Effect of the Burst Mode ..... 231
  - 14.7 A Theoretical Drug for the Mutation Represented by the Burst Mode ..... 231
  - 14.8 Notes ..... 236
- 15 Action Potentials: Summing Up the Effect of Loads of Ion Channels ..... 237**
  - 15.1 Whole Cell Action Potential Model ..... 238
    - 15.1.1 Conservation of Calcium ..... 240
    - 15.1.2 Definition of Calcium-Related Fluxes ..... 240
    - 15.1.3 Definition of Calcium Pumps ..... 242
    - 15.1.4 Definition of the Currents ..... 243
    - 15.1.5 Markov Models in Terms of Systems of Differential Equations ..... 244
  - 15.2 Numerical Simulations Using the Action Potential Model for Wild Type Markov Models ..... 245
    - 15.2.1 Single Action Potential ..... 246
    - 15.2.2 Many Action Potentials ..... 250

- 15.3 Changing the Mean Open Time of the Sodium Channel While Keeping the Equilibrium Probability Fixed Changes the Action Potential ..... 250
- 15.4 Numerical Simulations Using the Action Potential Model When the Cell Is Affected by a Mutation ..... 250
  - 15.4.1 Mutation of the Sodium Channel ..... 252
  - 15.4.2 Mutation of the RyR..... 253
  - 15.4.3 Mutation of the LCC ..... 253
- 15.5 Notes ..... 254
  
- Bibliography** ..... 257
